

## HypoSafe Changes the Company Name to UNEEG™ medical

February 1, 2017

Lynge, Denmark – February 1, 2017 – HypoSafe A/S is a privately held medical device company focused on developing and commercializing reliable detection & warning systems based on advanced EEG monitoring technologies. Today we announce our new company name: UNEEG™ medical A/S.

As we are getting closer to our first product launch we have realized that the former company name HypoSafe does not capture the essence of all the clinical potentials and market opportunities that lie in our unique technology. Our primary focus has always been to provide a warning system for severe hypoglycaemia based on continuous monitoring of brainwaves (EEG). However, our innovative EEG monitoring technology has a wide range of potential clinical applications, which is sustained by the fact that the first commercial product, the **24/7 EEG™ SubQ**, will be suitable for both research and clinical use in Epilepsy.

Today, our vision is not only to improve the lives of people with Diabetes. A few months from now we also expect to operate in the area of neurology. We have developed an implant that is innovative and unique in the sense that it makes EEG monitoring compatible with activities of daily living. As such **UNEEG™ medical** is the right name for our company since the name combines **UN**(united), **EEG** and **UNEEG** (unique) which communicates that we are in this world to provide solutions that will improve the quality of life of patients suffering from disorders that can be detected and alleviated by using the brain as a biosensor.

The former company name HypoSafe will remain an important part of the corporate strategy since the **hyposafe™ SubQ** is the second product in our pipeline.
